CORN PRODUCTION IN MISSOURI, 1928-1939

By Counties

The 12 years included in this statistical report on corn production in Missouri cover the period of the greatest fluctuation on record in both the acreage and yield of corn.

The acreage of corn planted in Missouri reached the 6 million acre level in 1884 and 10 years later had reached the 7 million acre level. After reaching a peak of a little over 8 million acres in 1917, the acreage planted to corn declined sharply during 1918 and 1919 to about 6-1/4 million acres which was about the average acreage for the 1920 to 1933 period. Beginning in 1934, another sharp decline occurred and in 1939 the acreage planted to corn was a little over half the record 1917 acreage and about a third less than the 10-year (1924-1933) average. The Agricultural Adjustment and Conservation Programs have been important factors in the decline in recent years.

The average yields per planted acre obtained during this 12-year period are relatively low, largely as a result of unfavorable weather.

In 1930, 1934, and 1936, the temperature during the growing season was much higher than normal, and the rainfall was much less. The average yields in 1934 of 5.0 bushels per planted acre and in 1936 of 7.6 bushels are the lowest on record. The 1930 average yield of 15.0 bushels per planted acre was the second lowest on record up to that date. Corn yields were also reduced by the cool wet growing seasons in 1929 and in 1935.

The estimates of acreage by counties are based largely upon the data from the Missouri Farm Census reports. These data were not collected in 1934 and the county acreages are based upon the United States Census data for that year.

The estimates of yields per acre were based upon information from regular and special crop correspondents of the Department and upon data from the United States Censuses of 1930 and 1935 covering the crop years 1929 and 1934.

Preliminary estimates of corn production by counties for the years 1929 to 1937 were made by the late Mr. E. A. Logan. Some revisions in the estimates for these years and the estimates for 1938 and 1939 were made with the assistance of Mr. T. C. M. Robinson, formerly Assistant Agricultural Statistician in the Columbia, Missouri, office.

Alfred C. Brittain,
Senior Agricultural Statistician.
